Press Release – Contract Award

Representative Stairwell for
Flex-Gate™ Installation

ILC DOVER AWARDED CONTRACT FOR DEPLOYABLE FLOOD CONTROL SYSTEMS

Flex-Gate™ Systems Protect NYC Subways from Costly Flooding

Frederica, DE - April 29, 2015 - ILC Dover, developer and manufacturer of the spacesuits used by NASA, signed a contract with J-Track LLC today to produce 23 Flex-Gate™ flood control systems for NYC Subway stairwells. The point of use deployable flood barriers, designed and manufactured by ILC, are an integral component of NYCT's (New York City Transit) proactive measures to protect New York's subway system from another storm like Hurricane Sandy. J-Track will perform the custom stairwell measurements, on-site preparation, and installation work required to install each Flex-Gate™.

Once installed within the stairwell opening, the Flex-Gate™ is ready for use at a moment's notice. In less than five minutes a single operator can deploy the cover and lock it down, and once deployed, the engineered system can hold back 14 feet of water. This rapidly deployable approach eliminates the need to store critical components at a remote location, and allows the subway system to remain operational for as long as possible prior to the storm onset.

“ILC Dover's flood protection solutions protect our customers' assets at a life cycle cost that is lower than any other system. Flex-Gate™ systems are installed at the site allowing it to stay open until the last possible moment before a storm and re-open without the delay necessitated by damage repair or restoration. Citizens and businesses will be able to get back to their lives and work faster after a storm.” said Alan George, business development manager at ILC Dover.

For more information on our complete line of flood protection products visit us at www.ilcdover.com.
