Major Types of Respirators
Air-Purifying Respirators, which remove contaminants from the air

1. Air-Purifying Respirator
   - Half Mask: APF=10
   - Full Face-piece: APF=50
   - Needs to be fit tested

2. Powered Air-Purifying Respirator (PAPR)
   - Loose-Fitting: APF=25
   - Helmet/Hood: APF=25/1,000

Notes:
1. Employers may select respirators assigned for use in higher workplace concentrations of a hazardous substance for use at lower concentrations of that substance, or when required respirator use is independent of concentration.
2. The assigned protection factors are only effective when the employer implements a continuing, effective, respirator programs required by this section (29 CFR 1910.134), including training, fit testing, maintenance, and use requirements.
3. This APF category includes filtering face-pieces, and half masks with elastomeric face-pieces.
4. The employer must have evidence provided by the respirator manufacturer that testing of these respirators demonstrates performance at a level protection of 1,000 or greater to receive an APF of 1,000. This level of performance can be best demonstrated by performing a WPF or SWPF study or equivalent testing. Absent such testing, all other PAPRs and SARs with helmets/hoods are to be treated as loose-fitting face-piece respirators, and receive an APF of 25.
5. These APFs do not apply to respirators used solely for escape. For escape respirators used in association with specific substances covered by 29 CFR 1910 subpart Z, employers must refer to the appropriate substance-specific standards in that subpart. Escape respirators for other IDLH atmospheres are specified by 29 CFR 1910.134(3)(2)(ii).
ADVANCED PROTECTION
ILC Dover is a recognized leader in the design and delivery of high-performing softgood solutions for perilous environments. What we do for astronauts working and living in space we continue to do for pharmaceutical personnel and life science professionals.

The Sentinel Clear™ system is the only PAPR that offers a clear hood engineered with advanced film technology for excellent visibility, comfort, and mission-critical protection.

ENHANCED PRODUCTIVITY
The Sentinel Clear PAPR is a superior solution when compared to other PAPR masks and facepieces. It offers a full 320-degree field of view, allows the wearer to have facial hair and/or a head covering, and reduces feelings of claustrophobia.

SMART SYSTEM DESIGN
Multiple filter and breathing tube options ensure that the assembly is easy to use and supports a range of applications.

STRONG, LIGHTWEIGHT BLOWER
The XT blower, when paired with ILC Dover’s lithium polymer battery, weighs just 2.2 pounds, yet delivers 8+ CFM airflow, exceeding NIOSH requirements. A nonincendive configuration is available for use in hazardous locations.

IMPROVED ERGONOMICS
Our back harness and Quick-Loc™ belt options support a range of user needs and preferences while increasing comfort and usability.
